## **DISEASE CONTROL IN PRINCE EDWARD ISLAND**

Because Prince Edward Island is “an island”, it is possible to control the importation of many potato pests and diseases. In addition to the rigorous controls imposed under the certification system, the province of Prince Edward Island has implemented a *Plant Health Act and Potatoes Regulations* that provides additional assurance of disease-free seed stocks. The Province is now considered to be free of Spindle Tuber Viroid and Bacterial Ring Rot has all but been eliminated in both seed and tablestock crops.

The Province of Prince Edward Island introduced a mandatory Post-harvest Laboratory Virus Testing Program in 1998. This program requires that all seedlots intended for planting on PEI be tested for Potato Virus Y (PVY) and Potato Leafroll Virus (PLRV). Samples must be collected or supervised by an inspector appointed by the Department of Agriculture and Forestry (PEIDAF) or the Canadian Food Inspection Agency (CFIA). Testing must be carried out in a CFIA accredited laboratory following a protocol approved by the Department of Agriculture and Forestry. Test results are released to the Agriculture Regulatory Programs Section of the PEIDAF and any seedlots that exceed the virus levels contained in the *Plant Health Act*, Potatoes Regulations are not eligible for planting on PEI.

Additional information on disease control in Prince Edward Island is available from:
